EASTERN KENTUCKY COAL RIVER TERMINALS

INTRODUCTION

Kentucky has more than 1,000 miles of navigable rivers over which 18 million tons of Kentucky coal were shipped in 2005. This Kentucky Coal Marketing Update includes a directory of the coal river terminals serving Kentucky as of December 2006. In it are listed the terminals, their locations, types of transportation access, current status and availability, capacities, types of equipment, and information on the operating companies.

<u>River/River Pool</u>	<u>Milepoint</u>	<u>Bank</u>	<u>Company Name</u>	<u>Terminal Name</u>
Big Sandy / Greenup Pool				
Greenup Lock and Dam on the Ohio	341.00			
Interstate 64 Crosses Big Sandy	2.60

Licking / Markland Pool				
Markland Lock and Dam on the Ohio	531.50			

EASTERN KENTUCKY COAL RIVER TERMINALS

User's Guide

The coal river terminals included in this directory are listed alphabetically by operating company on the following pages. The majority of the data presented herein has been obtained from the operator, the owner, or the U.S. Army Corps of Engineers, and represents the status of these terminals as of December 2006.

The information on the operating company, owner, and permit holder is self-explanatory with the following exceptions: The "owner" usually refers to the owner of the operating company and not necessarily of the river terminal. In most cases, the U.S. Army Corps of Engineers "permit holder" is the actual owner of the river terminal facility, but the terminal may be leased to someone else for operation of the facility.

Following are explanations of data items that may be included in the directory listing:

Terminal Name: The name as reported by the operator or owner.

Other Names or Former Name: Company names, location names (nearby towns or cities), or previous names (including those of previous operators or owners) by which the terminal was known. "N/A" means "not applicable", and "N/R" means "none reported".

River and Navigation Pool: Indicates the river in which the terminal is located and in which navigation pool/lock and dam. Lock & dam and pool locations can be found on Page 2 of this directory.

Mile point and River Bank: Published mile points were found to be inconsistent even between various U.S. Army Corps of Engineers publications. To resolve the inconsistencies, the load out point was marked on topographic maps and the mile point was measured. These measurements were used to verify published data, or in place of published data where significant differences were found. For rivers that border Kentucky, the Kentucky Bank or the neighboring state bank was indicated.

Operational Status: There are two categories: "active", i.e. in operation as of December 2006, and "inactive", i.e., physically present but not in operation in December 2006.

Terminal Availability: There are three classifications: "captive", i.e., the terminal is exclusive use of that company; "restricted", i.e.,

the privately owned terminal is reserved primarily for the use of coal companies, but some excess capacity may be available now or in the future; and "open", i.e., the terminal is available for use by anyone (although some special restrictions may apply for each terminal).

Access: Refers to "transportation access" by which the river terminal can receive coal, via truck, rail, barge, conveyor, or a combination of the above methods.

Rail Car Capacity: Indicates the total number of rail cars that can be stored at or near the terminal, both empty and loaded.

Load out Rate: Indicates the hourly rate at which the equipment can load coal into a barge, as reported by the operator. This is usually the equipment manufacturer's rating that indicates maximum capacity under ideal conditions, although several of the terminal operators relied on their own experience in reporting this figure.

Annual Capacity: Estimates are by the operators and are therefore somewhat inconsistent in definition with regard to the number of working hours per day, workdays per year, and the expectations of breakdowns, bad weather, river conditions, etc. However, these should be considered with the standards of operation at each terminal.

Ground Storage: Indicates the maximum number of tons or acreage available for stockpiled coal at the river terminal.

Equipment: Indicates the capability for coal crushing, stoker coal preparation, automatic sampling, or automated blending at the terminal.

Nearest Town: This usually refers to the nearest well-known, "major", city or town and not the nearest community.

County: This is the county listing that the river terminal is physically located in.

Quadrangle/Latitude/Longitude: Refers to standard U.S. Geological Survey (USGS) topographic 7.5-minute quadrangle maps. The latitude and longitude usually indicates the location of the terminal load out point, and not the entrance or building locations.

Nearest Highway: The nearest intersection of a highway or street where the terminal is located.

EASTERN KENTUCKY COAL RIVER TERMINALS

Operated By: **Appalachian Fuels**
Address: 1500 North Big Run Road
 Ashland, KY 41102
Telephone Number: 606-928-0460
